Introduction

Since autumn 2010, all local authorities have been required to submit an annual snapshot figure to DLUHC to indicate the number of people sleeping rough in their area on a 'typical' night between 1st October and 30th November. They can arrive at this snapshot by using one of three approaches:

1. **Count-based estimate** with a full physical count of visible rough sleeping
2. **Evidence-based estimate** meeting using evidence from different partner agencies, which may include people in hidden rough sleeping sites
3. **Evidence-based estimate, including a spotlight count** using evidence from different partner agencies. This includes a physical count of areas with visible rough sleeping alongside evidence for other locations (discussed during an estimate meeting), which may include people in hidden rough sleeping sites.

All of the above approaches record only those people seen or thought to be sleeping rough on a single 'typical' night. They do not include everyone in an area with a history of sleeping rough, or everyone sleeping rough in areas across the October-November period.

The annual rough sleeping snapshot allows local authorities to track progress, consider whether current measures are effective in tackling rough sleeping and if new approaches are needed. DLUHC produces a statistical release based on the data each year.¹

Homeless Link's role is to:

- Publish a toolkit that supports local authorities to produce the most accurate snapshot using one of the three approaches
- Provide support to local authorities in planning and carrying out the data collection
- Verify each rough sleeping snapshot
- Provide training and support to verifiers
- Cross-check the data submitted by local authorities to DLUHC with the numbers Homeless Link has verified for each local authority (the single figure of people sleeping rough and demographic information)

Local authorities should appoint a lead person to oversee the process and liaise with Homeless Link's Rough Sleeping Snapshot Project Coordinator for support and to arrange verification: verifiers@homelesslink.org.uk

¹ www.gov.uk/government/collections/homelessness-statistics#rough-sleeping

Why use snapshot estimates?

DLUHC currently collects monthly management information about the support provided for people sleeping rough and those at risk of sleeping rough from all local authorities across England. This data is collected on DELTA via the Rough Sleeping Monthly Survey; in addition, the Rough Sleeping Data Framework was launched across all local authorities in England in May 2023. It includes monthly rough sleeping snapshot estimates for all local authority areas. This information gives a fuller picture of the dynamic and seasonal nature of rough sleeping, and illustrates the work done by local authorities to provide a pathway off the streets and into long-term accommodation. The data are not subject to the same verification and certification processes that are part of the annual snapshot estimates.

This means that a dedicated systematic and consistent approach is needed in order to get comparable, real-time rough sleeping snapshot figures from every local authority in England. The approach used since 2010 is to collect national rough sleeping statistics using a snapshot approach where each local authority chooses one 'typical' night and follows the same guidance.

A snapshot records only those people seen or thought to be sleeping rough on a single 'typical' night. It does not include everyone in an area with a history of sleeping rough, or everyone sleeping rough in areas across the October-November period.

The process depends on local agencies having, and sharing, intelligence about who is sleeping rough and where. This can be a challenge because patterns of rough sleeping often fluctuate, for example as people move between sheltered and unsheltered homelessness; in and out of prison and hospital; into and out of relationships; and as housing, support and income become more or less available.

Homeless Link recommends that local authorities and their partners do not rely solely on the annual rough sleeping snapshot estimate in order to understand local need and to plan prevention and responses.

Engagement with people sleeping rough, and work to understand how to end rough sleeping locally alongside partners, should continue throughout the year. However, the snapshot provides a way of estimating the number of people sleeping rough across England on a single night and assessing changes in rough sleeping since 2010. The process also offers an opportunity to improve partnerships and responses, especially for those areas seeing an increase in people sleeping rough.

Submitting the snapshot estimate and demographic information

The snapshot estimate process takes place across England between 1st October and 30th November.

Local authorities submit their snapshot estimate and demographic information using the DLUHC DELTA online system. See the DELTA guidance document in the [Rough Sleeping Snapshot Estimate Toolkit 2023](#) for further information on how to set up your account and submit the data to the online system:

Data must be submitted to DLUHC by the local authority using DELTA by Friday 8th December 2023.

Collecting demographic data

The rough sleeping snapshot also collects demographic data on the numbers of women, men, under-18s, under-25s, over-25s, and UK and non-UK nationals represented among people sleeping rough. It is the responsibility of local authorities to submit aggregate data to DLUHC on the DELTA online system, alongside their final figure for the snapshot estimate. DLUHC will publish the data. All local authorities in England are required to submit this information to central government, as outlined in the Single Data List: www.gov.uk/government/publications/single-data-list

Where demographic information is not known (for example, because someone was asleep when seen), this should be noted for each category as 'not known'. The demographic data is collected as an indication of the representation of particular groups among people who are sleeping rough. There is no requirement for people sleeping rough to share their information for the purpose of these statistics, as 'not known' can be used instead.

The 'not known' category should also be used if individuals do not want to provide demographic information. You should not guess or make an assumption about demographics, but instead use the 'not known' category.

Neither Homeless Link nor DLUHC hold any case level data collected during the snapshot estimates, only aggregate data. Please see page 25 below for further guidance on data sharing.

Local authority mergers

Where local authorities have merged, the process should be carried out within the new local authority boundaries in order to submit one set of snapshot and demographic information. For support choosing which process is most appropriate within new boundaries, please contact verifiers@homelesslink.org.uk

Note that count-based estimates have one base of operations so that the verifier can check the whole process – if multiple bases are unavoidable, please contact Homeless Link at the earliest opportunity, as we may need to arrange multiple verifiers.

The Rough Sleeping Initiative (RSI)

The Rough Sleeping Initiative (RSI) funds local authorities to provide specialist services to help the most vulnerable people in society off the streets and into secure accommodation. Over 90% of local areas across England currently receive funding and support via the RSI. All local authorities, including those receiving RSI funding, are expected to provide monthly snapshot estimate figures to DLUHC via DELTA.

These monthly snapshot estimates are not official statistics and are not independently verified by Homeless Link.

Every local authority, whether RSI funded or not, should submit their annual snapshot figure and demographic data for the official rough sleeping statistics using the process that will most accurately reflect the number of people sleeping rough in their area.

If you are a RSI funded area, you may still select any of the three national snapshot estimate approaches. Your choice of approach should be based on your local context and should provide your area with the most accurate figure – please read the section below on ‘Deciding which approach to use for the snapshot estimate’ to choose the right approach for your local authority area.

The definition of 'rough sleeping'

For the purpose of the estimates, people sleeping rough are defined as:

People sleeping, about to bed down (sitting on/in or standing next to their bedding) or actually bedded down in the open air (such as on the streets, in tents, doorways, parks, bus shelters or encampments). People in buildings or other places not designed for habitation (such as stairwells, barns, sheds, car parks, cars, derelict boats, stations, or “bashes”).

A bash, or bender, is a makeshift shelter structure, often made from tarpaulin or wood.

It is important that partner agencies taking part understand the definition of rough sleeping and do not include people in hostels or shelters, individuals who are sofa-surfing, people in campsites or other sites used for recreational purposes or organised protest, squatters or Travellers.

If you have a site in your area that you are unsure falls under the rough sleeping definition or exclusions above, you should contact the Rough Sleeping Snapshot Project Coordinator. The Homeless Link verifier will also be able to offer guidance during the verification process.

The rough sleeping statistics do not include every form of homelessness or everyone sleeping rough during October and November – it is a single night snapshot, which includes only people seen, or thought to be, sleeping rough on the chosen single ‘typical’ night using one definition, as above.

Deciding which approach to use for the snapshot estimate

The local authority chooses the process that best meets its local context. While Homeless Link cannot tell local authorities which process to use, as part of our initial contact and verification we will ask why the choice has been made and provide feedback to local authorities where we have concerns that the proposed approach might not produce the most accurate snapshot. If evidence comes to light that the chosen process has missed out people known to the local authority, or included people who are not within the rough sleeping definition, we may not be able to verify the local authority's figure.

Please note that all local authorities, including RSI funded areas, can choose from any of these approaches.

1. A **count-based estimate** is the number of people seen sleeping rough in the local authority area on a 'typical' night – a single date chosen by the local authority between 1st October and 30th November. It is a snapshot and will not record everyone in the area with a history of rough sleeping during the two months.
2. An **evidence-based estimate** is an evidence-based assessment by partners, leading to a single snapshot figure that represents the number of people thought to be sleeping rough in the local authority area on a 'typical night' – a single date chosen by the local authority between 1st October and 30th November. It is a snapshot and will not include everyone in the area with a history of rough sleeping during the two months.
3. An **evidence-based estimate including a spotlight count** is as 2 above, with the evidence sources including a street count, which might not be as extensive as the count-based estimate. All spotlight counts must take place after midnight (taking into account the night-time economy of the area).

Reasons to choose a count-based estimate approach

- People sleeping rough are in sleep sites that will be visible/accessible at night
- There are changes in the number, population or location of people sleeping rough where sites are visible (e.g. areas near transport hubs where transient groups sleeping rough make the figures unpredictable from one night to the next; areas that regularly see people new to the streets)
- There are difficulties forming an evidence-based estimate on the basis of the information available (e.g. lack of partners who have intelligence about where people are sleeping rough, or partner agencies refuse to share data)
- There is significant disagreement about the numbers between agencies, and sites are visible/accessible

Reasons to choose an evidence-based estimate approach

- Sleep sites are inaccessible e.g. in woods or dispersed across rural areas
- Sleep sites are, during the night, unsafe to access or are hidden from sight
- The local authority cannot arrange safe access to known rough sleeping sites (e.g. parks, tower blocks) during a street count
- There is regular intelligence gathering in place by a number of agencies and they are happy to share their intelligence with the local authority
- Numbers of people sleeping rough are consistently low, they are already in touch with services, and partner agencies agree this is the case (i.e. there are rarely people who are new or returning to the streets)
- The local authority can gather sufficient and reliable intelligence on people sleeping rough on the typical night via partner agencies
- Partner agencies agree to collect information for an agreed night and to share this with the local authority for the purpose of the estimate

Reasons to choose an evidence-based estimate including a spotlight count approach

- There is a mix of visible/accessible and hidden/inaccessible locations in the local authority area
- The individuals sleeping rough or overall numbers of people sleeping rough in visible/accessible sites change frequently
- There are conflicting views from partner agencies about which method is right for the area
- Additional robust intelligence comes to light on the night of a planned street count about hidden rough sleeping (i.e. the process is expanded from count-based estimate to evidence based estimate meeting)

Local authorities can decide which approach to choose in order to determine their snapshot estimate. They should use the approach that will most accurately reflect the number of people sleeping rough in their area and will provide the most robust estimate.

The decision should be made by early September so that there is time to plan next steps – a count-based estimate requires approx. 6 weeks' lead-in time because it will involve partner agencies/volunteers.

For further guidance on using multi-agency meetings to agree which process to use, see the [Guide to Intelligence Gathering in the Rough Sleeping Snapshot Estimates 2023](#).

Changing approach from year to year

Any decision to change the overall approach from one year to the next should be guided by whether it will produce the most accurate and robust figure. Homeless Link will ask for details of this decision-making in our initial contact and during the verification process to seek confirmation that the change meets the criteria set out in this guidance (above).

Note that undertaking a count at other times of year is not in itself sufficient reason to change between evidence-based and count-based estimates. Counts taken at other points of the year may not be a guide to levels of rough sleeping in October/November as there may be seasonal fluctuations in the level and patterns of rough sleeping. The existence of hidden rough sleeping sites should also be considered when deciding on your choice of approach.

Local authorities can adjust aspects of the process from year to year to achieve greater accuracy, for example:

- Choosing the 'typical' night earlier (e.g. October) to reduce the risk of severe weather
- Changing night of the week in response to a busier night time economy
- Starting a street count later (e.g. 2am instead of midnight) in response to a busier night time economy
- Involving new partners and/or people with lived experience to improve evidence base/engagement
- Changing approach to take into account a significant change in the local context, such as boundary changes

Changing approach due to unforeseen circumstances

Plans for count-based snapshot estimates may need to be reviewed due to unforeseen circumstances, for example an unexpected extreme weather event or protests. Where a planned count-based estimate cannot go ahead and is changed to an evidence-based estimate or evidence-based estimate including a spotlight count, the local authority lead or count coordinator must email verifiers@homelesslink.org.uk to inform the Rough Sleeping Snapshot Project Coordinator. A Homeless Link verifier will attend the estimate meeting in lieu of the planned count. They will also carry out further verification including speaking to independent partners and other partner agencies. This further verification process must be completed and reviewed by the Homeless Link Rough Sleeping Snapshot Project Coordinator in order for a snapshot estimate to be considered verified following a change of approach.

Working with local partner agencies

Local partner agencies should be consulted to discuss what intelligence they have about rough sleeping locally to check if there are any factors that might affect the choice of a 'typical' night for the estimate.

The local authority should involve those local agencies that will have the most accurate information about who is sleeping rough.

Local partner agencies could include

- Outreach teams
- Advice agencies
- Hostels, day centres, night shelters
- Housing department
- Social Services, Youth Workers, Probation
- Police, community safety teams
- Town centre/local retail security /management
- Health and mental health services
- Housing Associations
- Park rangers
- Faith groups, soup runs, street pastors
- Refuse collectors
- Street wardens

Involvement of independent partners

In order to be verified by Homeless Link, at least one independent partner must be involved in the collection of the rough sleeping estimate for your area. An independent partner would be someone who is not commissioned or funded by the local authority; they could be from community groups, faith groups, soup kitchens or volunteers from the public for example. The Homeless Link verifier is not an independent partner.

The involvement of non-commissioned, independent partners is an essential element of any rough sleeping estimate, creating greater transparency about how the estimate is carried out and enabling Homeless Link to hear from independent partners as part of the verification process.

The independent partner/s involvement will differ depending on your area's choice of approach. In areas carrying out a count-based estimate, the independent partner **must** attend the street count. In areas using either the evidence-based estimate or evidence-based estimate including spotlight count approach, the independent partner **must** attend the estimate meeting. They may also choose to attend the spotlight count if they have sufficient resources, or be involved in providing intelligence on the individuals rough sleeping.

Identifying and contacting at least one independent partner should be part of the planning process. Where possible, we advise involving more than one independent partner.

Independent partners could include

- ✓ Community groups
- ✓ Faith groups
- ✓ Soup kitchens
- ✓ Volunteers from the public e.g. teachers, solicitors, vicars etc.
- ✓ People with lived experience of rough sleeping or homelessness
- ✓ Services not funded by the local authority e.g. hospices
- ✓ The local football foundation
- ✓ NHS staff who don't work in specialist homelessness services

The following would not be considered an independent partner

- ✗ Homeless Link verifier
- ✗ Outreach team
- ✗ Police
- ✗ Probation Service or other similar statutory organisations
- ✗ DLUHC

Where a snapshot estimate does not involve at least one independent partner, Homeless Link will not be able to verify the process.

If you have any issues with involving at least one independent partner, please contact Homeless Link's Rough Sleeping Snapshot Project Coordinator at the earliest opportunity via verifiers@homelesslink.org.uk

Guide to the count-based estimate approach

July – September

Appoint a coordinator

The local authority lead should decide to coordinate their own estimate or give responsibility for the count-based estimate process to an external coordinator, for example a rough sleeping coordinator, Housing Options manager or outreach team leader. They will need to involve local partner agencies in the process, including at least one independent partner to attend the count on the 'typical' night.

DELTA online data collection system

Check that the local authority lead has access to DLUHC's DELTA online data collection system. See the DELTA guidance in the Rough Sleeping Snapshot Estimates Toolkit for further support.

September

Choosing the date and time

Allow **at least 6 weeks** to plan the count. Activities leading up to the count will include:

- Gathering intelligence from partner agencies
- Preparing a data protection statement
- Organising volunteers, including an independent partner
- Planning the night's activities
- Liaising with the police
- Arranging a Homeless Link verifier

The count must take place on a single 'typical' night. If it spreads over two or more nights, the process cannot be verified.

When choosing a date, you should:

- Avoid a night when unusual local factors may distort the numbers, such as events, festivals, charity sleep-outs, higher levels of police activity or changes to service opening times.
- Identify an appropriate day of the week: people may bed down later or be less visible on weekends. Also take into account whether certain days, such as those on which football matches or club nights take place, may distort average levels of rough sleeping in the area.
- Make a contingency plan for severe weather conditions that change patterns of rough sleeping (see below).

The count night should not be used for media activity – the presence of film crews or photographers means that it is not a 'typical' night, for example because people may move sleep sites to avoid being filmed or photographed. Journalists can be present during the count provided they follow the guidance.

The date of the count should only be shared on a 'need to know' basis in case this causes a change in the pattern of rough sleeping, resulting in a less accurate figure.

Start times should be tailored to meet local circumstances. The earliest permitted start is midnight. In cities and towns with a busy nighttime economy, a start time of 2am or even later is more appropriate to include people who bed down after pubs and clubs close. In rural areas, where the majority of people are sleeping rough away from built-up and well-lit areas, counts may be conducted in the hours after dawn.

There is no fixed duration for a count – it will depend on geography, number of counters, number of people sleeping rough, and what occurs as the teams are talking to the people they meet e.g. getting people to shelter/hubs, or dealing with emergencies. Typically counts start between 12-2am and finish between 3-6am. In

most cases, if appropriate intelligence has been gathered and enough volunteers recruited, counts take no more than 2 to 3 hours to conduct.

Local authorities without regular outreach might want to do a street needs audit with a smaller team in advance of the count to gather intelligence about sleep sites, so that the count can be planned around known sleeping sites. In most areas it is not feasible to check every street/alley/car park etc., so some way of targeting teams is needed.

Pre-count activity

Please note that 'pre-counts' by outreach or police teams on the evening of the chosen 'typical' night should not be used, as they create a risk of disruption. Homeless Link may refuse to verify your count if it becomes clear that people who were sleeping rough during the pre-count are no longer visible (i.e. the pre-count moved them on, whether intentionally or not).

Homeless Link may require people housed during the pre-count to be included in your final figure, as they would have been counted if found later that night.

If outreach teams are in the habit of contacting people during an earlier evening pre-count because they are not visible at night (e.g. because they sleep in tents), the local authority should consider whether this is grounds to choose an evidence-based estimate, including a spotlight count approach instead.

Update Homeless Link and book your verifier

All snapshot estimates are verified by Homeless Link and we aim to verify all count-based estimates in person. Contact Homeless Link's Rough Sleeping Snapshot Project Coordinator at verifiers@homelesslink.org.uk as soon as you have confirmed your approach and count date so that we can arrange verification – please let us know as early as possible and notify us immediately if your date changes.

Counts need to be verified to ensure that they have been carried out safely and in accordance with this guidance. Verifiers are trained and supported by Homeless Link. They are associates or volunteers drawn from our staff, membership, partners, other local providers and the local community. The verifier's role is to take part and observe the count, not to organise it or lead on it during the night.

Coordinators must communicate with the verifier before and during the count. It is the coordinator's responsibility to confirm the date, time and venue of the count in advance with the verifier. If the verifier has not replied to confirm their attendance at least two weeks before the count, please alert Homeless Link's Rough Sleeping Snapshot Project Coordinator.

Early / mid-September

Recruiting counters

Many local authorities look for volunteers from their own workforce (in return for time off in lieu or overtime), as well as looking for volunteer counters from the local statutory and voluntary sectors or faith and community groups, e.g. police, park rangers, day centre staff, street pastors and advice workers. This is a good opportunity

for agencies to learn more about each other's work. If there is a local outreach team, they should be fully involved. Local authorities should always involve volunteers who are independent of the council and its outreach team (i.e. non-commissioned), as this strengthens the credibility of the count.

Where the process does not involve at least one independent partner, Homeless Link will not verify the process. Please involve at least one independent partner in order to be verified by Homeless Link.

If local authorities would like any help with engaging faith & community groups to be involved in the count, feel free to contact Housing Justice as follows:

- London – Mark Brennan, Partnerships and Development Manager, London m.brennan@housingjustice.org.uk
- Outside London – Isabella Harriss, Best Practice & Innovation Team Manager: i.harriss@housingjustice.org.uk

All those involved in the count should be asked not to share the date of the 'typical' night chosen beyond essential contacts.

Mid-September – count night

Organising a count base

A count base is necessary as it allows teams to be briefed beforehand, to ask any questions and to de-brief and share figures afterwards. It also ensures access to toilets and handwashing facilities during the night.

Coordinators should make an assessment on how the base of operations is able to meet any new public health guidelines that may come into force. The count base should have a risk assessment in order to be used on the night of the count. Please notify Homeless Link at the earliest opportunity if you have any issues with your count base: verifiers@homelesslink.org.uk

Mapping, counting teams and access

It is good practice to liaise with neighbouring areas and, if possible, organise a count on the same night over a county or wider sub-regional area. This reduces the risk of double counting people who move across local authority boundaries. Even if the count starts at midnight, always use 'night of into morning of' to ensure clarity about the date and aid travel/work planning e.g. night of Weds 15th into morning of Thurs 16th.

You don't need to cover every street or park in the local authority area, and it's unlikely you'll have enough counters to do this. It's better to use your prior intelligence gathering to focus on 'hotspot' areas where people are known to sleep and areas where people are sometimes seen bedded down. If you know that sleep sites are occupied but inaccessible or unsafe, consider using the evidence-based estimate meeting process including a spotlight count to achieve greater accuracy.

Coordinators should divide the area being counted into segments for each counting team.

Each counting team will need a map clearly showing the boundaries of their segment and any hotspots within it. Agree exact boundaries, identifying individual streets or parts of streets, and draw them on the map. It is important to be precise about boundaries so that areas are not double counted or missed entirely.

Wherever possible, the areas covered should be well known to the teams and individual counters. The most effective counters are those with knowledge of where people are likely to be sleeping rough in that area, for example workers from local outreach teams. Try to include someone with knowledge of local rough sleeping in each team, alongside volunteers from other agencies and independent partner(s).

Check that you have recruited enough volunteers to cover each mapped segment. It is advisable to plan at least one mobile counting team in a car to cover outlying areas and support other teams if they encounter delays. At least one person, usually the coordinator, will need to stay at the count base to deal with queries and check in with counting teams during the night.

Note that the verifier has to be in the first team to return to the base, or they should be collected by the mobile team/by taxi in order to get back to base to meet the first counting teams back.

Plan ahead to gain access to non-public areas where people may be bedded down (e.g. hospital or college grounds, parks, building stairwells, car parks). Do not plan access for volunteer counters to areas that will be unsafe. You might need to contact police, park rangers or security firms to gain access and support the count. In previous years, some local authorities have obtained keys to stairwells of flats where people were likely to be sleeping, which ensured counters could check these areas. This approach is recommended, as long as safety is maintained.

There are particular challenges associated with counting in rural and urban areas, and with certain groups of people sleeping rough. Please refer to the document 'Forms and Resources for Local Authorities' in the Rough Sleeping Snapshot Estimates Toolkit for further information.

Preparing a data protection statement

The coordinator should provide copies of a data protection statement on the night of the count. This is in case a person seen sleeping rough wants to know how their information will be used or stored, or to assist the person doing the count to answer any questions, from volunteers or members of the public for example. The GDPR lists the kinds of information that must be provided. See the 'Data sharing' section below.

Making contingency plans – emergency accommodation and severe weather (SWEP)²

Speak to local homelessness and housing services to agree the response to people found sleeping rough who want to access accommodation and support e.g. a hub, B&B or hostel. The count should not stop people from accessing accommodation. If there are severe weather conditions on the night of the estimate, the local authority may activate their Severe Weather Emergency Protocol (SWEP), if they have one. This provides support for individuals during extreme weather. If people sleeping rough do take up emergency accommodation as part of the SWEP, they are still included in the count.

Unusual circumstances such as severe weather conditions (e.g. activation of the severe weather emergency protocol (SWEP), snow, heavy rains or flooding) or man-made events such as riots or protests may have an impact on numbers. In some circumstances, it may be impossible for the count to go ahead.

If the planned count coincides with unusual circumstances – in particular activation of SWEP – the coordinator, in consultation with the verifier, may decide on one of the following courses of action:

- Postpone the count – it still has to happen by 30th November.
- Proceed as a spotlight count that is used to inform an evidence-based estimate meeting, based on actual numbers counted plus others, such as people in SWEP provision on the night of the count, who would otherwise have slept rough. This is the most common approach due to the strict Oct-Nov timeframe.
- Cancel the count and instead follow the evidence-based estimate meeting process, based on a single ‘typical’ night before 30th November where SWEP is not in force. You will need to follow the guidance, choose a new date and plan an estimate meeting with partner agencies.

2 weeks before the count

Information to/from counters, Homeless Link verifier and police

Confirm availability of counters and verifier, their contact details and addresses. Ensure there is a plan for everyone to get home safely – it is the coordinator’s responsibility to provide transport for counters and verifier. Depending on the start time and location of the count base, transport to the count may also be required. Please do not ask counters to arrive more than an hour before the count starts – it’s already a long night for everyone involved.

Send the ‘Briefing for street count teams and volunteers’ to the counters along with details of the date (‘night of x into morning of x’ format), time and base of operations

² Guidance on cold weather provision and SWEP: <https://homeless.org.uk/knowledge-hub/guidance-on-cold-weather-provision-swep-and-heatwaves/>

⁵ If an estimate is submitted on the basis of a count alongside actual number placed in SWEP, assessment and intelligence information must be used to ensure that only those people who would have slept rough on that night are counted, which might be different to the total number of people in SWEP

for the count. Ask them to bring mobile phone, torch and ID if possible. Confirm their transport home and get their postcode details if you need to arrange transport.

Speak with the verifier to talk through the plan for the count. Notify police of the count taking place.

The week of the count

Practical preparations

Ensure that you are ready for the count night:

- Check the weather forecast and review SWEP contingency plan.
- Book taxis to/from venue for counters and the verifier or put the taxi firm on standby.
- Print maps for each counting team showing the area and any hotspots to cover.
- Ensure each team will have a torch and phone, plus alarms and reflective jackets/armbands if using. Consider supplying hand sanitiser to counting teams.
- Prepare packs for counting teams: map, pens, definition of rough sleeping, ID letter, H&S checklist, rough sleeping count forms, any relevant local service info, language chart.
- Assign counters to teams, including an outreach worker or someone with local knowledge in each team. Put the verifier in the team that will return first or arrange for them to be picked up and brought back to base before any counting teams return.

The night of the count

Count process

- Check availability of emergency accommodation/assessment hubs on the night.
- Meet the verifier slightly earlier than the counters to run through plan for the night (or do this earlier on the phone).
- Ensure each counting team has a mobile, torch and pack – check you have the right mobile numbers.
- Talk through the Briefing for Count Teams, introduce the verifier and answer any questions.
- Agree timing of check-in calls to teams during the count.
- As each team returns, ask them to go through their count form with the verifier.
- If possible, offer hot drinks/snacks at the base of operations.
- If there have been any safety concerns during the count, ensure counters are debriefed and agree a follow up call.

- Agree a final figure and demographic information with the verifier once all forms have been returned.
- Check that each counter and the verifier has a safe route home – coordinate sharing taxis/lifts home.

Safety considerations

Count coordinators have a responsibility to ensure the safety of all those involved in the rough sleeping count. You should balance the need to keep people safe with the need to gather as much reliable information about people sleeping rough as possible.

In order to get this balance right, the coordinator should:

- Give clear guidance to counters about whether or not to wake up any unknown/new people found sleeping rough during the count. This would be to find out more about them and to offer support and, where available, assessment/accommodation. In most cases, unless counters are outreach workers, it will be safer not to wake the person, but to leave some information about local services and arrange for outreach to look for them on the next shift. Please note that demographic information can be recorded as 'not known'.
- Organise the count so that counters work in teams of at least two and have relevant equipment e.g. torches, phones. The coordinator should be aware of each team's planned route to and from their counting area and check in with them by phone at least once during the count.
- The conduct of the counters is of paramount importance and the pre-count briefing should set clear expectations. They should be given clear guidance beforehand about their role and should be sent home from the count if they are unsuitable (e.g. intoxicated).
- Counters should be told not to enter areas that they feel are unsafe without support from the police.
- Local police should be asked to assist with counts and are often willing to do so. Having police officers available on the night means that there are more options available around waking up unknown/new people to get information and offer support, but this must be done sensitively.
- A safe initial meeting and debriefing venue should be arranged, such as a local authority building or day centre, where counters can meet and return to once they have completed their section. There should be clear arrangements for getting to and accessing this building.
- Arranging safe transport from (and potentially to) the count base is the local authority coordinator's responsibility.
- Counters should carry identification and a letter from the local authority explaining their purpose in being out late at night and in unusual locations. It is common for counters to be challenged, for example by building concierges and car park security guards.

- On the night of the count, the count coordinator should go through the safety procedures carefully with counters and give counters time to ask questions. This will cover: when to call in, how to respond to emergencies, when to leave an area, and how to deal with any aggressive behaviour.
- While rare, there have been incidents of concern during counts – coordinators may want to seek advice from police in advance about potentially risky areas and adjust patches/exclude areas accordingly. If safety concerns mean that you are unable to visit certain areas, yet there is intelligence that individuals will be rough sleeping in this area on the ‘typical’ night, then a count-based estimate would not be suitable and you may not be verified as the figure would be inaccurate for your area. Please consider an evidence-based estimate, including a spotlight count instead to ensure all individuals (including those in the inaccessible unsafe areas) are counted. If you change approach due to intelligence, then inform Homeless Link at the earliest possible stage as this will affect the verification process.

Please also refer to the Count Risk Assessment (for coordinators) and Health & Safety Checklist (for counters) in the Forms & Resources section of the Rough Sleeping Snapshot Estimates Toolkit online.

Briefing the counters

The count coordinator should start the evening at the count base with a briefing session for counters. The briefing is to ensure that everyone understands:

- The definition of rough sleeping
- The role of the count coordinator and the verifier
- Any local arrangements for recording detail of individual people sleeping rough (DLUHC only require the single figure and demographic data) and support/accommodation options on the night
- Safety considerations, as listed above

Please also refer to the coordinator’s briefing notes in the Forms & Resources section of the Rough Sleeping Snapshot Estimates Toolkit online.

Interventions on the night

It is strongly recommended that prior arrangements are made so that emergency beds are available for people found on the count who want to move off the streets. If people sleeping rough are supported with any intervention on the night of the count (including referral to an assessment hub, use of emergency services, referral to SWEP or other emergency provision) they should still be counted as bedded down for the purposes of the count and recorded within the single figure. If someone is asleep and you have made the decision not to wake the individual because you have no offer of accommodation, leave a letter or card to let them know how they can contact the outreach team, local authority or other forms of support. Where possible, make a plan to return to their sleep site the following night.

Recording the data

On the night of the count, local authorities should use the Rough Sleeping Count Form (see Forms and Resources for Local Authorities) or create an alternative form for local use. The local authority should ask counters to collect any data about individuals, trends or hotspots that will be relevant to local planning. The Homeless Link verifier will ask about these plans, as well as verifying basic demographic data on gender, age and nationality.

- Counters should record each individual person on a separate line on the form, rather than writing totals on the form which cannot be verified as an accurate record.
- Information about each person sleeping rough may be recorded from previous knowledge of the person and their sleeping site, rather than having to wake them.
- If an individual is not known, and where it is safe to do so (see above), the counter may attempt to wake each individual to record their details. Even if the counter cannot observe or establish any details about the individual (for example because they are unable to wake them and they are covered up) they should still record them individually and use the 'not known' category for demographic details, unless counters know the individual (from the individual accessing their service, for example) and their details.
- Establishing the identity of a person sleeping rough on the night of the count will help with follow-up and referrals. However, note the data protection rules below.
- The count process includes collecting data on the number of non-UK nationals represented among people sleeping rough. To plan local responses for migrants sleeping rough see Homeless Link's guidance [here](#). Note that all people recorded and verified during the count must be included in the single figure, regardless of nationality or recourse to public funds and including people whose faces are covered and are not woken. Every person seen that meets the rough sleeping definition must be counted towards the final figure for your area.
- As counters might find people who do not speak English as their first language, it's useful to give them a language ID chart. This enables the person sleeping rough to point at their preferred language. Use the Refugee Council chart and provide copies for each counting team:
www.esht.nhs.uk/wp-content/uploads/2017/07/Language-identification-chart.pdf
- It is useful for counters to give as much information as possible on the location of people sleeping rough, as this may help with future planning of services, as well as more immediate offers of support.
- Counting forms must be completed on the night of the count and shown by the counters to the verifier on that night so they have a chance to ask any questions prior to verification. Ideally, this should happen without the coordinator present. Counting forms are kept by the local authority and destroyed following your data protection policies.

- The Homeless Link verifier will not confirm verification with you on the night or provide you with the verification form. The verification form will need to be reviewed by the Homeless Link Rough Sleeping Snapshot Project Coordinator who will then send the form to you, once reviewed.
- Data should not be uploaded to DELTA until the completed verification form has been sent from verifiers@homelesslink.org.uk.
- If demographic data changes (e.g. new information comes to light), inform Homeless Link as soon as possible as we will be cross-checking our verified data (the data on the verification form) with data submitted to DELTA. If the data does not match, and discrepancies are not resolved in time, then your submission will not be certified.
- Details of individuals sleeping rough are confidential. Information should be stored and shared in line with the protocol of the local authority (or the agency coordinating the count), which may include information sharing arrangements with relevant local services.

Data sharing

- The local authority hold and own any personal data collected; they are the data controller. It is their responsibility to ensure that the correct procedures are in place to adhere to the Data Protection Act 2018.
- Homeless Link and DLUHC receive aggregate data, via DELTA. No personal data is shared with either organisation therefore they are not data controllers in this process.
- As part of the count, it must be made clear to individuals that they are providing their personal details (name, date of birth) voluntarily, and are not obliged to provide them. If a person refuses to give their personal information, they should still be recorded as sleeping rough, and demographic information including gender, nationality, and age will be recorded as “not known” if this is not known.
- The count coordinator should provide copies of a data protection statement on the night of the count. This is in case a person seen sleeping rough wants to know how their information will be used and stored, or to assist the person doing the count to answer any questions. The GDPR lists the kinds of information that must be provided.

After the count

The Homeless Link verifier will seek to raise and resolve any issues with the coordinator on the night of the count. They will send the completed verification form to Homeless Link’s Rough Sleeping Snapshot Project Coordinator, on their next working day following the count. Homeless Link will review the verification form before returning it to the coordinator.

Please do not submit your data to DELTA until you have received the verification form with the verified data from verifiers@homelesslink.org.uk

After verification, local authorities should submit the single figure and demographic data using the DLUHC's DELTA online system. See the DELTA guidance in the [Rough Sleeping Snapshot Estimates Toolkit 2023](#) for further information:

Data must be submitted to DLUHC by the local authority using DELTA by Friday 8th December 2022.

Guide to the evidence-based estimate approach

July – September

Appoint a coordinator

The local authority lead should decide to coordinate their own estimate or give responsibility for the estimate process to an external coordinator, for example a rough sleeping coordinator, Housing Options manager or outreach team leader. They will need to involve local partner agencies in the process, including at least one independent partner to attend the estimate meeting.

DELTA online data collection system

Check that the local authority lead has access to DLUHC's DELTA online data collection system. For guidance see the

Choosing the 'typical' night

The estimate is based on a single, 'typical' night between 1st October and 30th November. The date can be at any point during October-November and can change from one year to the next (see above). The last possible date this year is night of Wednesday 29th into morning of Thursday 30th November.

The coordinator chooses the 'typical' night and agencies will collate intelligence in relation to this one night. It is good practice to liaise with neighbouring areas and, if possible, organise an estimate on the same night over a county or wider sub-regional area to minimise the risk of double counting.

Always use the date format 'night of x into morning of x' to avoid confusion e.g. 'the night of Wednesday 26th October into morning of Thursday 27th October.'

Estimates based on two or more nights cannot be verified.

When choosing your 'typical' night, please take into account the following:

- Avoid a night when unusual local factors may distort the numbers, such as events, festivals, charity sleep-outs, higher levels of police activity or changes to service opening times.

- Identify an appropriate day of the week: choosing a weekend may mean that people bed down later or are less visible. Also, consider whether certain days, such as those with club nights or football matches, may distort average levels of rough sleeping in the area.
- Whether an outreach shift is planned that can provide a spotlight count as a data source. Please note that all spotlight counts must start after midnight on the 'typical' night chosen and an outreach shift prior to midnight would not be classed as a spotlight count.
- Make a contingency plan for severe weather conditions that change patterns of rough sleeping (see below).

Update Homeless Link

All estimates are verified by Homeless Link. Contact Homeless Link's Rough Sleeping Snapshot Project Coordinator at: verifiers@homelesslink.org.uk as soon as you have confirmed your approach, 'typical' night, and estimate meeting date so that we can arrange verification.

In some cases, Homeless Link will ask a verifier to attend an online estimate meeting to verify the rough sleeping snapshot estimate. In other areas we will carry out telephone verification after the meeting. Where an estimate is informed by a spotlight count, Homeless Link will verify the overall estimate meeting rather than the spotlight count.

September

Involve partner agencies

Involving other agencies ensures that you will estimate the most accurate single figure, because:

- Agencies working 'on the ground' will have information about who is likely to be sleeping rough.
- In local authorities that cover large areas, involving agencies that see people in particular areas (such as a day centre in a particular town, or a warden covering a particular park), or have an overall coverage (such as police), will ensure that rough sleeping is evaluated across the whole area.
- Their knowledge, expertise, and intelligence about groups and individuals will provide a wider range of information on which to base discussion and analysis of rough sleeping numbers.
- The single figure is less likely to be challenged, both because agencies have taken part in the process and because the single figure has been reached using a clear system of evidence gathering.
- It enables local authorities to understand of the numbers and the issues, but also the potential solutions and opportunities for partnership working.

Local partner agencies for your estimate should include some or all of the following:

- Outreach teams
- Advice agencies
- Day centres, night shelters, hostels
- Housing associations
- Housing department
- Social services, youth workers
- Police, probation, community safety teams
- Health services, inc. mental health
- Faith groups, soup runs, street pastors
- Substance misuse agencies

Ideally, agencies will assign a lead representative who has access to the relevant information and some knowledge about the situation of individuals sleeping rough, so that they can answer specific questions and reach reliable conclusions about the likelihood of someone sleeping rough on a particular night.

In rural areas, or areas with few or no specific homelessness services, other partner agencies may need to be approached for information. The coordinator can assess whether it would be useful for them to attend an estimate meeting. These could include National Parks Service rangers, parish councils, refuse and street cleaning teams, town centre security and car parking staff.

All estimates will be need involve at least one independent partner at the estimate meeting, in order to be verified. Please refer to the section 'Involvement of independent partner(s)' in this document.

Explain the process

Where possible, hold initial meetings or conversations with each agency to explain the process, identify any potential sources of disagreement and resolve them in advance. For example, some agencies describe their service users as sleeping rough, but instead they are sofa surfing or squatting, so won't fall into the rough sleeping definition used for the snapshot estimate process. Having these conversations at the start of the process should make the estimate meeting more effective.

Notify agencies of the date chosen for the 'typical' night of the estimate. Please use the format 'the night of x into the morning of x' to avoid any confusion. Ask them only to share the date on a need-to-know basis to avoid causing changes in the pattern of rough sleeping that might distort the estimate.

Send this guidance to all agencies involved so that they understand the definition of rough sleeping and the process for the chosen approach.

Organise the estimate meeting

Confirm a date for the estimate meeting, **after** the chosen 'typical' night. A template invite letter can be found in the Forms & Resources section of the [Rough Sleeping Snapshot Estimates Toolkit 2023](#).

In areas where the local authority covers a large rural area, the coordinator may decide to carry out the consultation with local partner agencies via a range means, such as collecting evidence by email and holding an online estimate meeting to arrive at the single figure. Homeless Link must still be contacted to arrange verification.

We highly recommend that all estimate meetings are arranged as online meetings again this year. Please ensure partner agencies are aware of this and are able to access the relevant software for the estimate meeting to take place virtually and they are included in the process, are able to provide their intelligence and listen to others intelligence. Some organisations restrict use of certain meeting software. Check in advance if this will cause any problems.

Explain who will be included in the estimate

Refer to the rough sleeping definition below:

“People sleeping, about to bed down (sitting on/in or standing next to their bedding) or actually bedded down in the open air (such as on the streets, in tents, doorways, parks, bus shelters or encampments). People in buildings or other places not designed for habitation (such as stairwells, barns, sheds, car parks, cars, derelict boats, stations, or “bashes”).”

It is important that agencies taking part understand the definition of rough sleeping and do not include people in hostels or shelters, individuals who are sofa-surfing, people in campsites or other sites used for recreational purposes, organised protests, squatters or Travellers.

Agencies should understand that the purpose of the estimate is to assess the numbers of people rough sleeping on the chosen ‘typical’ night, rather than a larger sample of street activity, hidden homelessness or people using homelessness services. This means that, for example, a person who sometimes sleeps rough but sometimes has accommodation/shelter will not be included in the estimate unless there is evidence that they did sleep rough on the chosen ‘typical’ night.

Some services record people as sleeping rough based only on self-reporting, which might conflict with outreach data about how many people are seen or, where there is no outreach provision, cannot be verified. These services might need support to assess whether someone is street homeless on the ‘typical’ night used for the estimate. This can be done, for example, by asking for additional information such as rough sleeping locations that can be checked by other agencies. Some people may be reluctant to share their sleep sites for safety reasons. Women and young people, for example, will often try to remain hidden. Agencies should be mindful of this and work on a case-by-case basis when considering thresholds of evidence for rough sleeping (see ‘Evidence of rough sleeping’ section below).

Agree information sharing protocols

Estimates rely on agencies being able to share accurate basic information about an individual’s situation on a particular night. There has to be a way of identifying individuals, by name or a unique identifier e.g. initials and date of birth. Without this there is a risk of double counting or including people who have been housed.

Where agencies already have a data sharing protocol in place, for example from a Rough Sleeping Action Group or other multi-agency work, this can be used. If no data sharing agreement exists, you can use the template in the Forms & Resources section in the [Rough Sleeping Snapshot Estimates Toolkit 2023](#).

Some agencies may decline to join the data sharing agreement. In this case you should explain the protocol and give reassurance about what the data will be used for and that it will be discarded following the estimate. If they still refuse let them know that, while they can still submit information, more weight will be given to those agencies whose evidence is supported by complete data, as otherwise there is a risk of arriving at a less accurate figure, for example due to double counting.

Agencies should collect evidence for the night of the estimate and either bring it to the estimate meeting to discuss verbally or send by email in a password encrypted file. You can either circulate the template estimate form (see Forms and Resources for Local Authorities in the Rough Sleeping Snapshot Estimates Toolkit) or create your own form.

The local authority holds and owns any personal data collected; they are the data controller. It is their responsibility to ensure that the correct procedures are in place to adhere to the Data Protection Act 2018.

Homeless Link and DLUHC receive aggregate data, via DELTA. No personal data is shared with either organisation therefore they are not data controllers in this process.

A week before the estimate night

Severe weather

Check the weather forecast leading up to the night chosen for the estimate. If there is severe weather this could change patterns of rough sleeping, especially if the severe weather emergency protocol (SWEP) is in place. If this happens, you might need to change the date in order to ensure agencies are basing intelligence on a 'typical' night. Please inform Homeless Link if you decide to change your date, as we will need to make new verification arrangements.

Night of, and morning after the estimate

Partner agencies note any evidence of people sleeping rough, including observation and self-reporting, including specific details of location and individuals where available.

After the 'typical' night

The estimate meeting

Holding an estimate meeting is the most effective way to collate the evidence of rough sleeping on the chosen night and to discuss any potential duplicates or misinformation. Where disagreement is likely to occur, or where there are conflicting approaches between agencies on the scale of the issue or potential solutions, a meeting is most likely to get to the bottom of the issue.

Please note that the estimate meeting cannot take place on a date before the chosen 'typical' night.

Homeless Link verifiers will remotely attend a percentage of estimate meetings as part of the process based on a combination of concern/risk, geography and availability. The coordinator or any partners can invite Homeless Link to their meeting, request additional support or raise concerns for Homeless Link to investigate. Please contact

verifiers@homelesslink.org.uk if you would like to request a Homeless Link verifier to attend your estimate meeting.

If there is already a local forum or network which brings together key agencies working with people sleeping rough, this can be used for the estimate meeting (with expanded membership, if needed) as long as sufficient data sharing protocols are in place. If the local authority has a rough sleeping action group or similar meeting, the estimate process will be an extension of their ongoing work to identify and assist people sleeping rough.³

Please refer to the document 'Forms and Resources for Local Authorities' in the Rough Sleeping Snapshot Estimates Toolkit for a template agenda and notes for the estimate meeting.

If, despite best efforts, it is not possible for an agency to attend your online evidence-based estimate meeting, ask them to submit their evidence in a password encrypted email file or verbally in a telephone conference. Collate the evidence and resolve any issues or questions that may arise at the evidence-based estimate meeting.

During verification, Homeless Link will check which agencies have been involved. We expect that estimates using the evidence-based process will show more than one data source.

If the process does not involve at least one independent partner, Homeless Link will not verify the process. The independent partner(s) must attend the evidence-based estimate meeting; they may also contribute intelligence and be involved in the discussion of the final figure.

Evidence of rough sleeping

Each agency should present information on who they think slept rough on the night of the estimate, with reference to the definition of rough sleeping above. Evidence should be provided for each individual.

Examples of evidence that an individual slept rough include:

- Individual seen bedded down by the agency.
- Individual seen bedded down by another partner agency.
- Individual known to the agency and it is clear that they do not have accommodation that they can occupy (people sleeping rough over a longer period/with a history of rough sleeping).
- Individual self-reports sleeping rough over the period alongside evidence that they are sleeping rough (use of services, carrying/storing belongings, appearance – while bearing in mind many people sleeping rough are well-presented, other known factors).

³ <https://homeless.org.uk/knowledge-hub/resources-for-partnership-working-homelessness-forums-and-homelessness-rough-sleeping-strategies/>

- Information that demonstrates that someone known to be sleeping rough intermittently did sleep rough on the night in question (e.g. they weren't seen in their hostel; were at the day centre early; were discharged from prison or hospital shortly before).

The final decision on the estimated single figure is made by the local authority, taking into account all the evidence and eliminating duplicates or unsubstantiated data. The coordinator might need to collate further information following the estimate meeting in order to resolve any outstanding questions (particularly where people are known to move between local authority boundaries, as there is a risk of duplication with neighbouring estimates). Partner agencies should raise concerns with Homeless Link if they think decisions have been made that are not in line with this guidance by emailing: verifiers@homelesslink.org.uk

Verification

Coordinators should be liaising with Homeless Link throughout the whole process to ensure their estimate is as reliable as possible. Homeless Link should be invited to the estimate meeting – we will identify some meetings for verifiers to attend remotely, others will be verified by telephone.

The verifier will be checking that:

- The coordinator has followed the guidance.
- A 'typical' night has been chosen, in line with this guidance.
- The coordinator has contacted a range of local agencies, including relevant voluntary and community organisations, and invited them to be part of the estimate process.
- At least one independent partner has been involved in the process and attended the estimate meeting.
- Agencies have been given sufficient information to participate in the process and provide the information required.
- Agencies understand the principle of the 'typical' night and the definition of rough sleeping.
- There is a data sharing agreement in place between agencies.
- Enough data and evidence has been gathered to resolve conflicting information and avoid double counting.
- The estimate relates to the 'typical' night chosen, not a wider time period or group of homeless people.
- Intelligence has been examined and discussed to arrive at a reliable figure of people sleeping rough on the night chosen for the estimate.
- There is demographic data for each person sleeping rough and any gaps in data are explained and logged as 'not known'.

- There is a snapshot estimate to be submitted to DLUHC.

Homeless Link might not be able to verify an estimate if, for example: there were no independent partners involved; there was a lack of robust evidence that people included were sleeping rough on that night; or evidence was not included about known sleep sites or individuals sleeping rough.

After the estimate process ends, the verifier will complete the verification form, which will be reviewed by Homeless Link's Project Coordinator before being returned to the local authority lead.

Submitting the single figure

Once the estimate has been verified by Homeless Link **and the completed verification form received by the local authority**, they should submit the single figure and demographic data using the DLUHC's DELTA online system. See the DELTA Guidance in the [Rough Sleeping Snapshot Estimates Toolkit 2023](#) for further information.

Data must be submitted to DLUHC by the local authority using DELTA no later than Friday 8th December 2023.

Guide to the evidence-based estimate, including a spotlight count approach

Please refer to the above 'guide to the evidence-based estimate approach' section to arrange the estimate meeting aspect of your chosen approach.

Spotlight counts are a way to include count data alongside partner agency intelligence. This can be particularly effective for areas with people sleeping in a mix of urban and rural locations, or where there are a few hotspots with fluctuating numbers of people sleeping rough that require counting for accuracy.

All spotlight counts must take place after midnight. This is to take into account the night-time economy of the area. It may therefore mean that certain outreach shifts cannot be used as a spotlight count due to the timings of these shifts. Starting after midnight is required to avoid counting people who are part of wider street activity but have somewhere to stay and will not bed down for the night.

Except for starting after midnight, coordinators can decide to what extent a spotlight count follows the count process detailed above. At least one independent partner will need to attend the estimate meeting in order to be verified by Homeless Link (please

see the 'involvement of an independent partner(s)' section above). While involving independent partners in the count itself will lend that evidence more credibility, this may have resource implications for the independent partner and is therefore optional.

Please note, spotlight counts should only be used alongside other data sources – only choose the evidence-based estimate including a spotlight count approach if you are confident that there will actually be a range of different evidence sources (e.g. intelligence from park rangers or about rural sites, or from a day centre about hidden sites), as well as the spotlight count, from which you can arrive at an accurate snapshot figure. Otherwise, you should consider using a count-based estimate instead.

Follow the evidence-based estimates guidance, above, for the estimate meeting to take place after your 'typical' night chosen and include the spotlight count as one of your data sources. The spotlight count will need to take place on the 'typical' night you have chosen.

Pre-count activity

Please note that 'pre-counts' by outreach or police teams on the evening of the 'typical' night chosen should not be used, as they create a risk of disruption. See the 'pre-count activity' section above for further information.

Common issues to consider in your planning

- Changing approach. Areas are able to change approach but this should be led by intelligence. Homeless Link must be updated if you have changed approach as this can affect how the data needs to be verified.
- Further verification. This is the additional verification that takes place where a local authority has had to make a last-minute change of approach.
- Are you a RSI-funded area? If so, this should not have any effect on the annual snapshot estimates. Please read the section on RSI.
- Post-estimate meetings. Estimate meetings must not be held prior to the chosen 'typical' night. This will not provide accurate data, as you cannot predict who will be rough sleeping on the 'typical' night ahead.
- Evidence for estimate meetings. If you choose an evidence-based estimate, including a spotlight count approach the estimate meeting should discuss intelligence and evidence. If no additional information or data sources are discussed then essentially your approach will be an unverified count. Make it clear to partner agencies what evidence should be prepared and shared by them prior to the estimate meeting.
- Cross-LA coordination. We advise local authorities coordinate their date with neighbouring local authorities to avoid duplication of individuals being counted. However, we do not advise that you coordinate your choice of approach with neighbouring local authorities. Please read the section on the different approaches to choose the correct approach for your local authority.

- The timing of your spotlight count. Spotlight counts will not be verified if the count starts before midnight.
- The day of your 'typical' night. In previous years, Thursdays have been a popular choice of day to carry out the snapshot estimate. However, for some areas, there is a busy night-time economy on this particular night. Please consider if your area has a busier night-time economy on the day you have chosen, and if so, choose a different day.
- Pre-count activity. Please see the section on pre-count activity.

What We Do

Homeless Link is the national membership charity for frontline homelessness services. We work to improve services through research, guidance and learning, and campaign for policy change that will ensure everyone has a place to call home and the support they need to keep it.
